

The scatter plot displays the relationship between the Corruption Perception Index (CPI) on the y-axis and the Human Development Index (HDI) on the x-axis. The data points are categorized into two groups: red dots for countries with a negative correlation and blue dots for countries with a positive correlation. The plot shows a general trend where higher HDI is associated with higher CPI, but there is significant scatter, particularly for countries with lower HDI and CPI. The following table lists the countries shown in the plot, categorized by their correlation type.
